General Information

Shaw's™ 22-3-18 Fairways is a mini sized, slow release fertilizer with high potash for the demanding turf professional who needs a superior quality, dust free product. This product contains 85% of nitrogen from Nutralene® and 100% of potash from sulfate of potash. Regular use will help correct needed potash levels in high quality fairways. This product also contains Gro-Gard, a proprietary blend of two bio-active amino acids and co-factors; it activates key amino acids that help regulate nutrient movement between plant cells. And with greater nutrient availability, plants can achieve their full genetic potential for growth and vigor. Gro-Gard protects your turf, optimizes nutrient uptake and movement within plants, and enhances overall plant health.

Application Instructions

Methylene Urea releases by both hydrolysis and microbial activity and will give a 12 to 16 week period of sustained release nitrogen. Vary your rates according to your agronomic program and soil test results (Suggested rates and settings listed above).
