General Information

Shaw's® Bed & Edge Weed Control™ with Gallery® 38 plus Team Pro is a pre-emergence herbicide for control on certain broadleaf weeds and suppression of annual grasses in established turf grasses and landscape ornamentals. Bed & Edge Weed Control takes care of 95 broadleaf weeds around driveways, sidewalks, flower beds and other hard to reach places.

Application Instructions

This fertilizer product contain Gallery® and Team® Pro, preemergence herbicides for control of certain broadleaf weeds and annual grasses in established turfgrass and landscape ornamentals. This product will not control existing weeds. Existing weeds should be controlled by cultivation or with a foliar applied post emergence herbicide.

Optimum weed control performance will be obtained when an application is followed by overhead irrigation or rainfall within a few hours. A single rainfall or sprinkle irrigation of 0.5 inch or more is required to activate this product.

Apply this product uniformly over the turfgrass area. Check frequently to make sure equipment is operating properly and distributing product uniformly. A more uniform application may be achieved by spreading half of the required amount of product over the area and then applying the remaining half in swaths at a right angle to the first. Avoid skips and excessive overlaps as poor weed control of turfgrass injury may occur.

IMPORTANT: Read the entire Directions for Use and Conditions of Sale before using this product. **FOLLOW DIRECTIONS CAREFULLY.**
